

ABSTRACT OF THE DISCLOSURE

A method of training a computer system via human voice input from a human teacher is provided. In one embodiment, the method includes presenting a text spelling of an unknown word and receiving a human voice pronunciation of the unknown word. A phonetic spelling of the unknown word is determined. The text spelling is associated with the phonetic spelling to allow a text to speech engine to correctly pronounce the unknown word in the future when presented with the text spelling of the unknown word.
